

Oh how it passes by so quick,
it never really stops
and how the clock goes tick, tick, tick
in houses, stores, and shops.
there are milliseconds, seconds, minutes, and hours.
Some are short and some are long
Some clocks are in giant towers,
which make a bigger dong.
It has three hands, one hour, one minute
and one that goes tick, tock, tick.
it also has gears that turn and move it
and if it breaks, fix it quick!
